Serial No. 10/688,993 Examiner Gregory A. Wilson Art Unit 3749 Page 2

7. (Currently amended) A system for exhausting smoke from a space <u>defined by a building</u>, <u>wherein the space has having an upper boundary wall</u>, wherein the space is a space of a building, and smoke accumulates from the upper boundary <u>wall of the space</u> downward, comprising:

at least one opening through the upper boundary <u>wall</u> of the space <u>defined by</u> of a building to exhaust smoke from the space <u>the smoke that accumulates from the upper boundary wall of the space downward</u>; and

at least one make-up air shaft communicating through the upper boundary wall with air outside the space and extending downward from the upper boundary wall to below the smoke.

15. (Currently amended) A method for exhausting smoke from a space <u>defined by a building</u>, wherein the space has having an upper boundary <u>wall</u>, wherein the space is a space of a building, and smoke accumulates from the upper boundary <u>wall of the space</u> downward, comprising:

exhausting the smoke from the space of a building through at least one opening in the upper boundary wall the smoke that accumulates from the upper boundary wall of the space downward; and

introducing make-up air into the space through at least one make-up air shaft communicating through the upper boundary wall with air outside the space and extending downward from the upper boundary wall to below the smoke.
